Attorneys for Plaintiff Jamie Grubensky

**UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA**

JAMIE GRUBENSKY,

Plaintiff,

vs.

PFIZER INC., VIATRIS INC., GREENSTONE
LLC, PRASCOLABS, PHARMACIA &
UPJOHN; and DOES 1 through 50, Inclusive,

Defendants.

CASE NO: 4:24-cv-8746

**COMPLAINT AND DEMAND FOR
JURY TRIAL**

Plaintiff JAMIE GRUBENSKY, by and through Plaintiff's undersigned counsel, brings this civil action against Defendants for personal injuries and damages suffered by Plaintiff, and alleges upon information and belief as follows:

INTRODUCTION

1. This is an action for damages related to Defendants' wrongful conduct in connection with the development, design, testing, manufacturing, labeling, packaging, promoting, advertising, marketing, distribution, and selling of medroxyprogesterone acetate (hereafter "MPA"), also known as depot medroxyprogesterone acetate (hereinafter "DMA"). Defendants' trade name for this prescription drug is Depo-Provera® (hereinafter "Depo-Provera").

1 2. Defendants manufacture, promote, and sell Depo-Provera as prescription drug used
2 for contraception or to treat endometriosis, among other indications. Depo-Provera is manufactured
3 as an injection to be administered intramuscularly every three (3) months in either the upper arm or
4 buttocks.

5 3. Depo-Provera injured JAMIE GRUBENSKY (hereinafter “Plaintiff”) by causing or
6 substantially contributing to the development of an intracranial meningioma, a brain tumor, which
7 required significant and invasive treatment and has resulted in serious injuries.

8 4. Defendants knew or should have known that for decades that Depo-Provera, when
9 administered and described as intended, can cause or substantially contribute to the development of
10 meningiomas.

11 5. Several scientific studies have established that progesterone, its synthetic analogue
12 progestin, and Depo-Provera in particular, cause or substantially contribute to the development of
13 intracranial meningioma, a type of brain tumor.

14 6. Nevertheless, Defendants failed to warn, instruct, advise, educate, or otherwise
15 inform Depo-Provera users and prescribers about the risk of intracranial meningioma or the need
16 for monitoring for resultant symptoms. To date, the U.S. label for Depo-Provera still makes no
17 mention of the increased risk to patients of developing intracranial meningiomas despite the fact
18 that the European Union (EU) and the United Kingdom labels now list meningioma under the
19 “special warnings and precautions for use” section and advise EU patients to speak with their doctors
20 before using Depo-Provera if they have any history of meningioma.

21 7. As a proximate result of Defendants’ wrongful actions and inactions, Plaintiff was
22 injured and suffered damages from Plaintiff’s use of Depo-Provera.

23 8. Plaintiff therefore demands judgement against Defendants and requests, among other
24 things, compensatory damages, statutory damages, punitive damages, attorneys’ fees, and costs.

25 ///

26 ///

27 ///

PARTIES

9. At all relevant times hereto, Plaintiff JAMIE GRUBENSKY (hereinafter “Plaintiff”) was a resident of Napa, California.

10. Defendant PFIZER INC. (hereinafter “Pfizer”) is a corporation organized under Delaware law with its principal place of business at The Spiral, 66 Hudson Boulevard East, New York, NY 10001.

11. Defendants VIATRIS INC. (hereinafter “Viatris”) is a corporation organized under Delaware law with its principal place of business at 1000 Mylan Boulevard, Canonsburg, PA 15317.

12. Defendant GREENSTONE, LLC (hereinafter “Greenstone”) is a limited liability corporation organized under Michigan law with its principal place of business at its headquarters at Pfizer Peapack Campus, 100 Route 206 North, Peapack, NJ 07977.

13. Defendant PRASCO LABS. (hereinafter “Prasco”) is a corporation organized under Ohio law with its principal place of business at 6125 Commerce Court, Mason, OH 45040.

14. Defendant PHARMACIA & UPJOHN (hereinafter “Pharmacia & Upjohn” or “Upjohn”) is or was a corporation organized under Michigan law and headquartered at 7171 Portage Road, Kalamazoo, MI 49002.

15. Defendant Pfizer is the current New Drug Application (hereinafter “NDA”) holder for Depo-Provera and has solely held the NDA for Depo-Provera since 2020. Upon information and belief, Pfizer has effectively held the NDA since at least 2002 when it acquired Pharmacia & Upjohn—who then held the NDA—as a wholly owned subsidiary. No later than 2003 did Pfizer’s name appear on the label alongside Pharmacia & Upjohn.

16. At all relevant times, Defendant Pharmacia & Upjohn was a wholly owned subsidiary of Defendant Pfizer until Upjohn was spun off in a merger in 2020 to create Defendant Viatris and the remnants of Pharmacia were retained by Pfizer.

///

///

///

COMPLAINT AND DEMAND FOR JURY TRIAL

17. Defendant Greenstone, founded in 1993, was a wholly owned subsidiary of Pfizer, that at pertinent times was in the business of offering a product portfolio of “authorized generic” medicines, covering a broad range of therapeutic areas including Depo-Provera.

18. Defendant Greenstone is a company that until November 2020 was styled as a wholly owned subsidiary of Pfizer but was in fact exclusively staffed with Pfizer personnel who reported to Pfizer’s HR department, were on Pfizer’s payroll, and shared the same corporate space with Pfizer in Peapack, NJ. Pfizer also managed Greenstone’s key business functions, including financial and sales analysis, business technology, customer service, legal matters, intellectual property, and supply chain operations. Thus, Greenstone was effectively a department within Pfizer.

19. Defendants Greenstone/Pfizer sold a “generic” version of Depo-Provera that was in fact what is known as an “authorized generic.” Unlike standard generics, which must contain only the same active ingredients and have the same pharmaceutical effect but can otherwise contain vastly different additives, “authorized generics” are exact replicas of the brand name drug, with the identical chemical composition, simply marketed without the brand-name on its label. In other words, Greenstone was presenting itself as a distinct generic manufacturing entity when it was in fact Pfizer personnel producing the exact same brand-name Depo-Provera at Pfizer’s own facility.

20. The FDA has stated that the term “authorized generic” drug is most commonly used to describe an approved brand name drug that is marketed without the brand name on its label. Other than the fact that it does not have the brand name on its label, it is the exact same drug product as the branded product. An “authorized generic” may be marketed by the brand name drug company, or another company with the brand company’s permission.¹

21. Indeed, Pfizer’s own website still states that “GREENSTONE Authorized Generics are manufactured to the same standards and at the same facilities as Pfizer brand-name drugs.”²

¹ See <https://www.fda.gov/drugs/abbreviated-new-drug-application-anda/fda-list-authorized-generic-drugs> (last accessed Oct. 4, 2024).

² See <https://www.pfizer.com/news/press-release/press-release-detail/pfizers-greenstone-and-digitalmens-health-clinic-roman> (last accessed Oct. 4, 2024).

22. Defendant Viatris was formed by the merger of Upjohn, Greenstone, and another company, Mylan N.V., in November 2020. Viatris is thus merely the latest iteration of Upjohn and Greenstone.

23. Even after the merger, Defendant Greenstone has continued to operate from the same location at Pfizer's corporate offices in Peapack, NJ.

24. Additionally, Defendant Pfizer retained 57% ownership of Viatris stock, making Pfizer the majority owner of Viatris, and since Pfizer retained the remnants of Pharmacia, Pfizer effectively remains the majority owner of Defendants Pharmacia & Upjohn and Greenstone.

25. Defendant Prasco is another "authorized generic" manufacturer of Depo-Provera, meaning Prasco simply takes brand-name Depo-Provera manufactured by Defendants Greenstone and/or Pfizer and passes it off as its own generic product. Defendant Prasco consistently maintains a sizeable percentage of the market share for Depo-Provera sales in the US.

26. All Defendants do business in California by, among other things, distributing, marketing, selling and/or profiting from brand name and/or "authorized generic" Depo-Provera in California, as well as throughout the United States.

27. At all times material herein, Defendants were, and still are, pharmaceutical companies involved in the manufacturing, research, development, marketing, distribution, sale, and release for use to the general public of pharmaceuticals, including Depo-Provera and its "authorized generic" version, in California, and throughout the United States.

JURISDICTION AND VENUE

28. This Court has diversity jurisdiction over this action pursuant to 28 U.S.C. § 1332, as the amount in controversy exceeds \$75,000.00 and the Parties are citizens of different States.

29. All Defendants regularly conduct business in California.

30. This Court has supplemental jurisdiction over the remaining common law and state claims pursuant to 28 U.S.C. § 1367.

31. Venue is proper in this Court pursuant to 28 U.S.C. § 1391 because a substantial part of the events or omissions giving rise to the claim, including the distribution, sale and administration of Depo-Provera to Plaintiff and Plaintiff's development and treatment of meningioma, all occurred in the Northern District of California.

PLAINTIFF JAMIE GRUBENSKY'S SPECIFIC FACTS

32. In or around 2001, at the age of 17, Plaintiff JAMIE GRUBENSKY was first administered Depo-Provera for contraception at various Kaiser Permanente facilities in California, including Vacaville Medical Center, Fairfield Medical Offices, Santa Rosa Medical Center, Ontario Medical Center, and Rancho Cucamonga Medical Center.

33. At all times relevant herein, Defendants represented Depo-Provera to be appropriate, safe, and suitable for such purposes through the label, packaging, patient inserts, and advertising.

34. Plaintiff regularly received Depo-Provera injections from approximately 2001 to 2022 in accordance with her physicians' prescriptions, and medical records, which amounts to roughly eighty-four (84) injections.

35. At least two (2) of those injections consisted of Greenstone/Pfizer's "authorized generic" Depo-Provera which is identical to brand name Depo-Provera.

36. Over time Plaintiff developed disturbing symptoms including severe headaches, facial pain, and visual disturbance. After numerous medical visits and testing procedures, Plaintiff was diagnosed with an intracranial meningioma.

37. Specifically, on October 23, 2022, Plaintiff underwent an MRI which confirmed intracranial meningioma.

38. Thereafter, on September 7, 2024, Plaintiff underwent an MRI of the neck which revealed an extra medullary intraduramass at the right aspect of the spinal canal between the C5 and C7 levels, for which differential considerations include meningioma.

39. On November 6, 2024, Plaintiff underwent a surgical resection of the masses in her cervical spine. Biopsy confirmed the masses were meningiomas.

1 40. Further, as a result of Defendants' actions and inactions, Plaintiff has suffered serious
2 injuries and damages due to Plaintiff's development of an intracranial meningiomas, treatments,
3 surgical resection and sequelae related thereto.

4 41. Plaintiff was not aware, nor did she suspect that Depo-Provera had any connection
5 to her meningioma until July 2024.

6 7 **GENERAL ALLEGATIONS**

8 **A. Intracranial Meningioma**

9 42. Intracranial meningioma is a medical condition in which a tumor forms in the
10 meninges, the membranous layers surrounding the brain and spinal cord.

11 43. Although the tumor formed by an intracranial meningioma is typically histologically
12 benign (meaning it usually does not metastasize), the growing tumor can nevertheless press against
13 the sensitive surrounding tissues, i.e., the brain, and thereby cause a number of severe and
14 debilitating symptoms ranging from seizures and vision problems to weakness, difficulty speaking,
15 and even death, among others. Moreover, a sizeable number of meningiomas (15-20%) do become
16 metastatic, greatly increasing their danger.

17 44. Treatment of a symptomatic intracranial meningioma typically requires highly
18 invasive brain surgery that involves the removal of a portion of the skull, i.e., a craniotomy, in order
19 to access the brain and meninges. Radiation therapy and chemotherapy may also be required as the
20 sensitive location of the tumor in the brain can render complete removal highly risky and technically
21 difficult.

22 45. Due to the sensitive location of an intracranial meningioma immediately proximate
23 to critical neurovascular structures and the cortical area, surgery can have severe neurological
24 consequences. Many studies have described the potential for postoperative anxiety and depression
25 and an attendant high intake of sedatives and antidepressants in the postoperative period. Surgery
26 for intracranial meningioma can also lead to seizures requiring medication to treat epilepsy.

Moreover, meningiomas related to progesterone-based contraceptives tend to manifest at the base of the skull where removal is even more challenging, further increasing the risks of injuries.

B. Depo-Provera

46. Depo-Provera (depot medroxyprogesterone acetate, hereinafter “DMPA”) was first approved by the FDA in 1992 to be used as a contraceptive, and later, with the approval of the Depo-SubQ Provera 104 variant in 2004, as a treatment for endometriosis.

47. Depo-Provera is administered as a contraceptive injection that contains a high dose of progestin, a synthetic progesterone-like hormone that suppresses ovulation.

48. Depo-Provera is a 150 mg/mL dosage of DMPA that is injected every three (3) months into the deep tissue musculature of either the buttocks or the upper arm, with present labelling recommending alternating the injection site at each injection.

49. Defendant Pfizer represents Depo-Provera to be one of the most effective contraceptives in existence. In fact, the Depo-Provera label groups injectable contraceptives like Depo-Provera alongside “Sterilization” as the most effective contraceptive methods resulting in the fewest unintended pregnancies.

50. Among reproductive age women who used any form of contraception from 2017-2019, the contraceptive injection was most often used by young women, lower-income women, and Black women.³

51. Depo-Provera was first developed by Upjohn (later acquired by Defendant Pfizer) in the 1950s.

52. Upjohn introduced Depo-Provera as an injectable intramuscular formulation for the treatment of endometrial and renal cancer in 1960.

53. The NDA for Depo-Provera for use as a contraceptive was originally submitted to the FDA by Upjohn in 1967; however, this application was rejected.

54. Upjohn again applied to the FDA for approval to market Depo-Provera as a contraceptive in 1978 but was again rebuffed.

³ See <https://www.kff.org/womens-health-policy/fact-sheet/dmpa-contraceptive-injection-use-andcoverage/> (last accessed Oct. 4, 2024).

55. Upjohn applied to the FDA for a third time for the approval of Depo-Provera as a contraceptive in 1983, but the FDA once again rejected the application.

56. As early as 1969, Upjohn successfully received approval for Depo-Provera for contraception in international markets, including France.

57. Upjohn's NDA for Depo-Provera for use as a contraceptive was eventually approved by the FDA on or about October 29, 1992.

58. Upjohn merged with Swedish manufacturer Pharmacia AB to form Pharmacia & Upjohn in 1995.

59. Defendant Pfizer acquired Pharmacia & Upjohn in 2002, thereby acquiring the Depo-Provera NDA as well as the associated responsibilities and liabilities stemming from the manufacturing, sale, and marketing of Depo-Provera.

60. Pfizer has effectively held the Depo-Provera NDA since acquiring Pharmacia & Upjohn in 2002, and has solely held the NDA since 2020, when Upjohn was spun off to form Defendant Viatrix.

61. Throughout the time Defendants marketed both variants of Depo-Provera, Defendants failed to provide adequate warnings to patients and the medical community, including Plaintiff's prescribing physician, of the risks associated with using the drug.

62. Defendants also failed to adequately test Depo-Provera to investigate the potential for intracranial meningioma.

63. Defendants are also liable for the conduct of its predecessors who failed to adequately design, test, and warn of the dangers associated with use of Depo-Provera.

C. The Dangers of Depo-Provera

64. The association between progesterone and meningioma has been known or knowable for decades, particularly for sophisticated pharmaceutical corporations like Defendants engaging in FDA-required post-market surveillance of their products for potential safety issues. That duty includes an obligation to keep current with emerging relevant literature and where appropriate, perform their own long-term studies and follow-up research.

65. Since at least 1983, the medical and scientific communities have been aware of the high number of progesterone receptors on meningioma cells, especially relative to estrogen receptors.⁴

66. This finding was surprising and notable within the medical and scientific communities because it had previously been thought that meningioma cells, like breast cancer cells, would show a preference for estrogen receptors.⁵ Researchers publishing in the *European Journal of Cancer and Clinical Oncology* instead found the opposite, indicating progesterone was involved in the incidence, mediation, and growth rate of meningiomas.⁶ This particular study was published nearly a decade before the FDA approved Depo-Provera for contraception in 1992. In those nine (9) years before Depo-Provera was approved for contraception, and in the thirty-two (32) years since—more than forty (40) years in all—Defendants have seemingly failed to investigate the effect of their high-dose progesterone Depo-Provera on the development of meningioma.

67. Since at least as early as 1989, researchers have also been aware of the relationship between progesterone-inhibiting agents and the growth rate of meningioma.⁷ That year, the same authors published a study in the *Journal of Steroid Biochemistry* entitled, “Effect of steroids and antisteroids on human meningioma cells in primary culture,” finding that meningioma cell growth was significantly reduced by exposure to mifepristone, an antiprogesterone agent.⁸

68. Numerous studies published in the decades since have presented similar findings on the negative correlation between progesterone-inhibiting agents and meningioma.⁹

⁴ See Blankenstein, et al., “Presence of progesterone receptors and absence of oestrogen receptors in human intracranial meningioma cytosols,” *Eur J Cancer & Clin Oncol*, Vol. 19, No. 3, pp. 365-7- (1983).

⁵ See *id.*

⁶ See *id.*

⁷ See Blankenstein, et al., “Effect of steroids and antisteroids on human meningioma cells in primary culture,” *J Steroid Biochem*, Vol. 34, No. 1-6, pp. 419-21 (1989).

⁸ See *id.*

⁹ See, e.g., Grunberg, et al., “Treatment of unresectable meningiomas with the antiprogesterone agent mifepristone,” *J Neurosurgery*, Vol. 74, No. 6, pp. 861-66 (1991); see also Matsuda, et al., “Antitumor effects of antiprogesterones on human meningioma cells in vitro and in vivo,” *J Neurosurgery*, Vol. 80, No. 3, pp. 527-34 (1994).

69. Relatedly, a number of studies published in the interim have reported on the positive correlation between a progesterone and/or progestin medication and the incidence and growth rate of meningioma.¹⁰

70. In 2015, a retrospective literature review published in the peer-reviewed journal BioMed Research International by Cossu, et al. surveyed the relevant literature including many of the studies cited above and concluded that mifepristone, an antiprogesterone agent, had a regressive effect on meningioma, meaning it stopped or reversed its growth.¹¹ Reviewing the Blankenstein studies as well as many others conducted over a span of more than thirty (30) years, the authors concluded that mifepristone competes with progesterone for its receptors on meningioma cells and, by blocking progesterone from binding, stems or even reverses the growth of meningioma.

71. In light of the aforementioned studies, for several decades the manufacturers and sellers of Depo-Provera and its authorized generic and generic analogues, Defendants, had an unassignable duty to investigate the foreseeable potential that a high dose synthetic progesterone delivered in the deep tissue could cause the development or substantially contribute to the growth of meningioma. Defendants were also best positioned to perform such investigations. Had Defendants done so, they would have discovered decades ago that their high dose progestin Depo-Provera was associated with a highly increased risk of meningioma and would have spared Plaintiff and countless others the pain and suffering associated with meningioma. Instead, Defendants did nothing, and therefore willfully failed to apprise the medical community, and the women patients receiving quarterly high dose injections, of this dangerous risk.

¹⁰ See, e.g., Gil, et al., “Risk of meningioma among users of high doses of cyproterone acetate as compared with the general population: evidence from a population-based cohort study,” *Br J Clin Pharmacol*. Vol. 72, No. 6, pp. 965-68 (2011); see also Bernat, et al., “Growth stabilization and regression of meningiomas after discontinuation of cyproterone acetate: a case series of 12 patients,” *Acta Neurochir (Wien)*. Vol. 157, No. 10, pp. 1741-46 (2015); see also Kalamarides, et al., “Dramatic shrinkage with reduced vascularization of large meningiomas after cessation of progestin treatment,” *World Neurosurg*. Vol. 101, pp 814.e7-e10 (2017).

¹¹ See Cossu et al., “The Role of Mifepristone in Meningiomas Management: A Systematic Review of the Literature” *BioMed Res. Int.* 267831 (2015), <https://doi.org/10.1155/2015/267831>

1 72. Indeed, more recently, researchers have found that prolonged use (greater than one
2 year) of progesterone and progestin, and specifically Depo-Provera, is linked to a greater incidence
3 of developing intracranial meningioma, as would be expected based on all the aforementioned
4 studies and recognition of the relationship between dose and duration of use and the development
5 of adverse events well recognized in the fields of pharmacology, toxicology, and medicine.

6 73. In 2022, an article was published in the journal *Endocrinology* entitled “Estrogen and
7 Progesterone Therapy and Meningiomas.”¹² This retrospective literature review noted that a “dose-
8 dependent relationship” has been established between at least one progestin and the incidence and
9 growth rate of meningioma. The study authors further noted that progesterone-mediated
10 meningiomas appear to be located most often in the anterior and middle base of the skull and are
11 more likely to be multiple and require more intensive treatment.

12 74. In 2023, researchers reported on a direct link between Depo-Provera and
13 meningioma. That year a case series was published in the *Journal of Neurological Surgery Part B:*
14 *Skull Base* titled “Skull Base Meningiomas as Part of a Novel Meningioma Syndrome Associated
15 with Chronic Depot Medroxyprogesterone Acetate Use.”¹³ The abstract reported on 25 individuals
16 who developed one or more intracranial meningiomas related to chronic use of Depo-Provera. Of
17 the twenty-five (25) patients, ten (10) were instructed to cease Depo-Provera use, after which five
18 (5) of those patients had “clear evidence of tumor shrinkage,” leading the authors to conclude “there
19 appears to be a clear progestin meningioma syndrome associated with chronic DMPA use.”

20 75. In 2024, the French National Agency for Medicines and Health Products Safety
21 along with several French neurosurgeons, epidemiologist, clinicians, and researchers published a
22 large case control study in the *British Medical Journal (BMJ)*, one of the premier scientific journals
23
24
25

26 ¹² Hage, et al., “Estrogen and progesterone therapy and meningiomas,” *Endocrinology*, Vol. 163,
pp. 1-10 (2022).

27 ¹³ Abou-Al-Shaar, et al., “Skull base meningiomas as part of a novel meningioma syndrome
28 associated with chronic depot medroxyprogesterone acetate use,” *J Neurol Surg Part B Skull Base*,
Vol. 84:S1-344 (2023).

1 in the world, to assess the risk of intracranial meningioma with the use of numerous progestogens
2 among women in France, hereinafter referred to as the Roland study.¹⁴

3 76. By way of history, the Roland study noted that concerns over meningiomas
4 associated with high dose progestogen medications resulted in the recent discontinuation of three
5 such medications in France and the EU. Specifically, there were “postponements in the prescription
6 of chlormadinone acetate, nomegestrol acetate, and cyproterone acetate, following the French and
7 European recommendations to reduce the risk of meningioma attributable to these progestogens in
8 2018 and 2019.”¹⁵

9 77. The study analyzed 18,061 cases of women undergoing surgery for intracranial
10 meningioma between 2009 and 2018. The study found that “prolonged use of ...
11 medroxyprogesterone acetate [Depo-Provera] ... was found to increase the risk of intracranial
12 meningioma.” Specifically, the authors found that prolonged use of Depo-Provera resulted in a
13 555% increased risk of developing intracranial meningioma. The study authors concluded “[t]he
14 increased risk associated with the use of injectable medroxyprogesterone acetate, a widely used
15 contraceptive,” was an important finding. The authors also noted Depo-Provera is “often
16 administered to vulnerable populations,” i.e., lower-income women who have no other choice but
17 to take the subsidized option which only requires action every three months to remain effective for
18 its intended use of preventing pregnancy, and, in the case of the subcutaneous variant, treating
19 endometriosis.

20 78. The 2024 Roland study published in BMJ studied the effect of several other
21 progestogen-based medications. Three study subjects showed no excess risk of intracranial
22 meningioma surgery with exposure to oral or intravaginal progesterone or percutaneous
23 progesterone, dydrogesterone or spironolactone, while no conclusions could be drawn for two others
24 due to lack of exposed cases. The other medications, including medroxyprogesterone acetate (Depo-
25

26 ¹⁴ Roland, et al., “Use of progestogens and the risk of intracranial meningioma: national case-
27 control study,” *BMJ*, Vol. 384, published online Mar. 27, 2024 at <https://doi.org/10.1136/bmj-2023-078078> (last accessed Apr. 21, 2024).

28 ¹⁵ See *id.*

Provera), were found to be associated with an increased risk of intracranial meningioma, with Depo-Provera having by far the second highest increased risk, surpassed only by the product cyproterone acetate, which had already been withdrawn from the market due to its association with meningioma.

79. Depo-Provera had by far the highest risk of meningioma surgeries amongst progesterone contraceptive products studied, rendering Depo-Provera more dangerous than other drugs and treatment options designed to prevent pregnancy due to the unreasonably increased risk of injury associated with intracranial meningioma, including but not limited to seizures, vision problems, and even death.

80. Further, the Roland study found the longer duration of exposure had a greater risk noting the results show that three quarters of the women in the case group who had been exposed for more than a year had been exposed for more than three years.

81. The Roland study noted that among cases of meningioma observed in the study, 28.8% (5,202/18,061) of the women used antiepileptic drugs three years after the index date of intracranial surgery.

D. Defendants' Failure to Test Depo-Provera

82. Defendants knew or should have known of the potential impact of the drug to cause the development of intracranial meningioma but failed to adequately study these adverse effects.

83. Furthermore, despite the fact that studies have emerged over the course of decades providing evidence of the meningioma-related risks and dangers of progesterone and progestins and Depo-Provera specifically, Defendants have failed to adequately investigate the threat that Depo-Provera poses to patients' well-being or warn the medical community and patients of the risk of intracranial meningioma and sequelae related thereto.

E. Defendants' Continuing Failure to Disclose Depo-Provera's Health Risks

84. According to the Drugs@FDA website, the label for Depo-Provera has been updated on at least thirteen (13) occasions since 2003, with the most recent update coming in July 2024.¹⁶

¹⁶ See Drugs@FDA:FDA-Approved Drugs-Depo-Provera, <https://www.accessdata.fda.gov/scripts/cder/daf/index.cfm?event=overview.process&ApplNo=020246> (last visited Apr. 29, 2024).

1 Despite the fact there are at least fourteen (14) iterations of the Depo-Provera label, Defendants’
2 labels have not contained any warning or any information whatsoever on the increased propensity
3 of Depo-Provera to cause severe and debilitating intracranial meningioma like that suffered by
4 Plaintiff.

5 85. Despite the aforementioned article in the BMJ and all the preceding medical
6 literature cited above demonstrating the biological plausibility of the association between
7 progesterone and meningioma, evidence of Depo-Provera related cases of meningioma and the
8 evidence of other high dose progestones causing meningiomas, Defendants have still made no
9 change to the U.S. Depo-Provera label related to intracranial meningioma. Furthermore, Defendants
10 have failed to take any steps to otherwise warn the medical community and Depo-Provera users of
11 these significant health risks, despite changing the label as recently as July 2024 to include warnings
12 about pregnancy-related risks, and despite Defendant Pfizer stating to The Guardian when the BMJ
13 article was released in April 2024: “We are aware of this potential risk associated with long-term
14 use of progestogens and, in collaboration with regulatory agencies, are in the process of updating
15 product labels and patient information leaflets with appropriate wording.”¹⁷

16 86. Defendant Pfizer has changed the label in the EU and the UK and potentially in other
17 countries. Specifically, Defendants’ Depo-Provera label in the EU now contains the following
18 addition under the section titled “Special warnings and precautions for use”: “Meningioma:
19 Meningiomas have been reported following long term administration of progestogens, including
20 medroxyprogesterone acetate. Depo-Provera should be discontinued if a meningioma is diagnosed.
21 Caution is advised when recommending Depo-Provera to patients with a history of meningioma.”

22 87. Additionally, Defendants’ Package Leaflet in the EU which provides information for
23 the patient states that “before using Depo-Provera[,]... it is important to tell your doctor or healthcare
24
25

26 ¹⁷ “Hormone medication could increase risk of brain tumours, French study finds,” The Guardian,
27 published online Mar. 27, 2024 (available at
28 [https://www.theguardian.com/society/2024/mar/27/hormone-medication-brain-tumours-
risk-progestogens-study](https://www.theguardian.com/society/2024/mar/27/hormone-medication-brain-tumours-risk-progestogens-study)) (last accessed Sept. 12, 2024).

1 professional if you have, or have ever had in the past ... a meningioma (a usually benign tumor that
2 forms in the layers of tissue that cover your brain and spinal cord).”

3 88. Nothing was or is stopping Defendants from adding similar language to the label and
4 package insert for Depo-Provera in the United States. Defendants could have at any time made
5 “moderate changes” to the label.

6 89. Specifically, Defendants could have filed a “Changes Being Effected” (“CBE”)
7 supplement under Section 314.70(c) of the FDCA to make “moderate changes” to Depo-Provera’s
8 label without any prior FDA approval.

9 90. Examples of moderate label changes that can be made via a CBE supplement
10 explicitly include changes “to reflect newly acquired information” in order to “add or strengthen a
11 contraindication, warning, precaution, or adverse reaction.” By definition and by regulation such
12 changes to add a warning based on newly acquired information—such as that imparted by newly
13 emerging literature like the litany of studies cited above—are considered a “moderate change.” §
14 340.70(c)(6)(iii).

15 91. Recently, the Third Circuit reaffirmed that plain text interpretation of the CBE
16 supplement in a precedential decision holding that the defendant in that case, Merck, could not rely
17 on a preemption defense based on an allegedly irreconcilable conflict between federal (FDCA) and
18 state (civil tort) law so long as the warning could have been effected via a CBE change. See generally
19 *In re Fosamax (Alendronate Sodium) Prods. Liab. Litig.*, Case No. 22-3412, D.I. 82 at 73 on the
20 docket (J. Jordan) (3d Cir. Sept. 20, 2024) (noting “the availability of a label change via a CBE
21 supplement is problematic for Merck, as will very often be the case for pharmaceutical companies
22 raising an impossibility defense”).

23 92. Defendants could have also instructed physicians to consider its own safer alternative
24 design, a lower dose medroxyprogesterone acetate injected subcutaneously instead of the more
25 invasive and painful intramuscular injection method. Studies going back at least ten years have
26 shown that the 150 mg dose of Depo-Provera—when administered subcutaneously, instead of
27 intramuscularly—is absorbed by the body at a similarly slower rate as the lower dose 104 mg Depo-
28

1 SubQ Provera 104 version.¹⁸ Nevertheless, Defendant never produced a 150 mg subcutaneous
2 version. Nevertheless, Defendant never produced a 150 mg subcutaneous version.

3 93. Knowing that the lower dose 104 mg Depo-SubQ Provera 104 was equally effective
4 and was easier to administer since it involved a smaller needle being injected only below the skin
5 and not all the way into the muscle, Defendants could have educated the gynecology community
6 that it had a safer alternative product to Depo-Provera which was more well known to prescribers
7 and patients.

8 94. In Europe and other counties outside of the United States, this 104 mg subcutaneous
9 dose has a more accessible trade name, “Sayana Press”, unlike the unwieldy proprietary
10 developmental name of “Depo-SubQ Provera 104”. Sayana Press sold in Europe may be self-
11 administered by patients, obviating the need for quarterly visits to a medical practitioner.

12 95. When Depo-SubQ Provera 104, under NDA number 21-583, submitted by Defendant
13 Pharmacia & Upjohn, a subsidiary of Defendant Pfizer, was approved by the FDA on February 17,
14 2004, more than two decades ago, those Defendants submitted a proposed trade name that the FD
15 did not approve, so instead, the propriety name Depo-SubQ Provera 104 was deemed to be the brand
16 name.

17 96. Inexplicably, and presumably for commercially beneficial or contractual reasons,
18 Defendant Pfizer made a conscious decision to not seek an alternative commercially more accessible
19 brand name, and to not endeavor to more vigorously advocate for the sale of Depo-SubQ Provera
20 104 to patients seeking contraception, despite knowing it had a lower safer and effective dosage
21 which would mitigate the potential for adverse reactions engendered by a high dose progestin,
22 including the risk of developing or worsening meningioma tumors.

23 97. The “lowest effective dose” is a well-known concept in the field of pharmaceuticals
24 wherein a drug-maker should seek to find the lowest possible dose at which the drug of interest is
25 efficacious for the intended use, as any additional dosage on top of that lowest effective dose is
26 inherently superfluous and can increase the risk of unwanted side effects.

27 ¹⁸ See Shelton, et al., “Subcutaneous DPMA: a better low dose approach,” Contraception, Vol. 89,
28 pp. 341-43 (2014).

1 98. Either change—adding a warning about the risk of meningioma based on “newly
2 acquired information” or advising physicians to consider a switch to subcutaneous Depo-SubQ
3 Provera 104—either on its own or taken together, would have constituted a “moderate change” or
4 changes justifying a simple CBE supplement that Defendants could have effectuated immediately,
5 and then simply notified the FDA thereafter. Yet, Defendants have failed to do so, and that failure
6 continues to date. Defendants ignored reports from patients and health care providers throughout the
7 United States which indicated that Depo-Provera failed to perform as intended.

8 99. Defendants also knew or should have known of the effects associated with long term
9 use of Depo-Provera, which led to the severe and debilitating injuries suffered by Plaintiff and
10 numerous other patients. Rather than conducting adequate testing to determine the cause of these
11 injuries for which it had notice or rule out

12 100. Depo-Provera’s design as the cause of the injuries, Defendants continued to falsely
13 and misleadingly market Depo-Provera as a safe and effective prescription drug for contraception
14 and other indications.

15 101. Plaintiff and Plaintiff’s physicians foreseeably used Depo-Provera, and did not
16 misuse or alter Depo-Provera in an unforeseeable manner.

17 102. Through its affirmative misrepresentations and omissions, Defendants actively
18 concealed from Plaintiff and her physicians the true and significant risks associated with Depo-
19 Provera use.

20 103. As a result of Defendants’ actions, Plaintiff and her physicians were unaware, and
21 could not have reasonably known or have learned through reasonable diligence, that Plaintiff would
22 be exposed to the risks identified in this Complaint and that those risks were the direct and proximate
23 result of Defendants’ conduct.

24 104. As a direct result of being prescribed and consuming Depo-Provera, Plaintiff has
25 been permanently and severely injured, having suffered serious consequences.

1 105. As a direct and proximate result of her Depo-Provera use, Plaintiff suffered severe
2 mental and physical pain and suffering and has sustained permanent injuries and emotional distress,
3 along with economic loss including past and future medical expenses.

4 106. Despite diligent investigation by Plaintiff into the cause of these injuries, including
5 consultations with medical providers, the nature of Plaintiff's injuries and damages and their
6 relationship to Depo-Provera was not discovered, and through reasonable care and diligence could
7 not have been discovered, until a date within the applicable statute of limitations for filing Plaintiff's
8 claims.

9
10 **LIABILITY OF PFIZER, GREENSTONE, VIATRIS, AND PRASCO FOR THE**
11 **"AUTHORIZED GENERICS"**

12 107. Defendants Greenstone, Viatris and Prasco were at different times from 2004 until
13 the present the authorized generic "manufacturer" and distributor operating under the same NDA of
14 Depo-Provera, with the express permission of Pfizer, to make, label, distribute, sell, and market
15 Depo-Provera without the brand name on its label, even though it is the exact same drug product as
16 the branded Depo-Provera manufactured in some or all instances by Pfizer.

17 108. Accordingly, the authorized generic distributors Greenstone, Viatris, and Prasco
18 operated as if they were the brand name holder under the same NDA and could have changed the
19 brand name label to warn of the risks of meningioma and the use of high dose progestins.

20 109. Further, the "authorized generics" distributors Greenstone, Viatris, and Prasco could
21 have requested that Pfizer, with whom they were under contract to sell the "authorized generic", to
22 change the brand name label to warn of the risks of meningioma and the use of high dose progestins.

23 110. Pfizer had a duty to change the label knowing that its "authorized generic"
24 distributors Greenstone, Viatris, and Prasco, with whom they were in contract and receiving revenue
25 from the sale of the "authorized generic" DMPA were selling the "authorized generic" without
26 warning of meningioma risk.

1 111. Pfizer knew that its authorized generic manufacturers held a large market share of its
2 manufactured Depo-Provera under a different name.

3 112. Pfizer was at some or all of the pertinent times the actual manufacturer of the DMPA,
4 identical to Depo-Provera other than its name, which was sold by Defendants Greenstone, Viatris,
5 and Prasco who were at different times the “authorized generic” distributor, with the express
6 permission of Pfizer, to distribute, sell, and market Depo-Provera without the brand name on its
7 label.

8
9 **INNOVATOR LIABILITY UNDER CALIFORNIA LAW**

10 113. In October of 2002, Defendant Pfizer's patent for Depo-Provera expired. Following
11 this, the FDA approved various generic versions of Depo-Provera for sale in the United States.
12 Despite the availability of generics, Pfizer has continued to manufacture, market, and distribute the
13 brand-name Depo-Provera across the United States, including in California.

14 114. A manufacturer wishing to market a generic version of an FDA-approved drug can
15 submit an Abbreviated New Drug Application (ANDA). This allows the generic manufacturer to
16 rely on the NDA filed by the brand-name manufacturer by demonstrating that the generic version
17 contains the same active ingredients and is biologically equivalent to the brand-name drug.¹⁹

18 115. As part of the NDA, the brand-name manufacturer must propose the exact text of the
19 label, subject to FDA approval.²⁰ For generics, the ANDA process mandates that the safety and
20 efficacy labeling must be identical to that of the brand-name drug.²¹

21 116. While the brand-name manufacturer bears responsibility for the accuracy and
22 adequacy of the drug label, generic manufacturers are only required to ensure that their labels mirror
23 the brand-name version.²² The California Supreme Court has reasoned that because a brand-name
24

25 ¹⁹ See 21 U.S.C. § 355(j)(2)(A)(ii), (iv). 21 See 21 U.S.C. § 355; see also 21 C.F.R. § 314.105(b).;
26 *See also*

27 ²⁰ C.F.R. § 314.105(b).

28 ²¹ See 21 U.S.C.A. § 355(j); see also *PLIVA, Inc. v. Mensing*, 564 U.S. 604, 612-13 (2011).

²² See generally 21 U.S.C. § 355; see also 21 C.F.R. § 314.105(b). 24 *T.H. v. Novartis Pharm. Corp.*, 4 Cal. 5th 145, at 166 (2017).

1 manufacturer is responsible for the content of a drug's warning label, it “knows to a legal certainty
2 ... that any deficiencies in the label for its drug will be perpetrated in the label for its generic
3 bioequivalent.”²³ As a result, the content of the generic labels for Depo-Provera bioequivalents is
4 entirely dictated by the brand-name manufacturer Defendant Pfizer’s label. Thus, California law
5 liability for failure to warn can extend to Defendant Pfizer, even when the consumer is prescribed
6 only the generic version.

7 117. Because generic manufacturers must replicate the brand-name label exactly,
8 Defendant Pfizer exerted exclusive control over the contents of the labels used by generic versions
9 of Depo-Provera that Plaintiff may have been prescribed and administered. Consequently, any
10 deficiencies or omissions in Defendant Pfizer’s label would have been reflected in the generic labels.

11 118. As the brand-name manufacturer of Depo-Provera, Defendant Pfizer had and
12 continues to have a duty to ensure that the labeling for Depo-Provera remains accurate and adequate
13 “as soon as there is reasonable evidence of an association of a serious hazard with a drug,” regardless
14 of whether a causal relationship has been established.²⁴ Defendant Pfizer was not only in the best
15 position to provide warnings regarding Depo-Provera's risks but was also the only entity legally
16 authorized to update the label unilaterally under federal law.

17 119. Defendant Pfizer knew or should have known that any failure to adequately warn of
18 Depo-Provera’s risks would be replicated in the labels of its generic bioequivalents, directly
19 affecting the information available to physicians and patients regarding both the brand-name and
20 generic drugs. Accordingly, it is foreseeable that the warnings included or omitted on the brand-
21 name drug label would influence dispensing of the generic drug and the decision-making of
22 unsuspecting doctors and patients, like Plaintiff and Plaintiff’s physicians, as to whether to take a
23 generic equivalent of Depo-Provera and/or brand-named Depo-Provera for contraception.

24 120. As the brand-name manufacturer of Depo-Provera, Defendant Pfizer could have, at
25 any time, unilaterally updated the Depo-Provera label without waiting for FDA preapproval in order
26 to “add or strengthen a contraindication, warning, precaution, or adverse reaction” under the CBE

27 ²³ T.H. v. Novartis Pharm. Corp., 4 Cal. 5th 145, at 166 (2017).

28 ²⁴ See 21 C.F.R. § 201.80(e).

1 regulation.²⁵ As the brand name manufacturer of Depo-Provera, Defendant Pfizer had a duty to give
2 information about Depo-Provera to the medical community and public at large.

3 121. Despite having the ability and obligation to provide timely and adequate warnings,
4 Defendant Pfizer failed to take such action, contributing to the harm suffered by Plaintiff.

5 122. Thus, to the extent that any of the approximately sixty-four (64) doses of Depo-
6 Provera administered to Plaintiff were generic, Defendant Pfizer is additionally liable for any
7 resultant harm to Plaintiff from those generic doses under California's well-established doctrine of
8 innovator liability.

9
10 **EQUITABLE TOLLING OF STATUTE OF LIMITATIONS**

11 123. Defendants willfully, wantonly, and intentionally conspired, and acted in concert, to
12 withhold information from Plaintiff, Plaintiff's healthcare providers, and the general public
13 concerning the known hazards associated with the use of, and exposure to, Depo-Provera,
14 particularly over extended periods of time.

15 124. Defendants willfully, wantonly, and intentionally conspired, and acted in concert, to
16 withhold safety-related warnings from the Plaintiff, and the general public concerning the known
17 hazards associated with the use of, and exposure to, Depo-Provera, particularly over extended
18 periods of time.

19 125. Defendants willfully, wantonly, and intentionally conspired, and acted in concert, to
20 withhold instructions from the Plaintiff, her family members, and the general public concerning how
21 to identify, mitigate, and/or treat known hazards associated with the use of, and exposure to, Depo-
22 Provera, particularly over extended periods of time.

23 126. The aforementioned studies reveal that discontinuing use of high dose progesterone
24 and progestin, including Depo-Provera, can retard the growth of meningiomas, but failed to warn
25 the medical community and the Plaintiff of this method to mitigate the damage of a developing
26 meningioma.

27
28 ²⁵ See 21 C.F.R. § 314.70(c)(6)(iii)(A).

1 127. Defendants willfully, wantonly, and intentionally conspired, and acted in concert, to
2 ignore relevant safety concerns and to deliberately not study the long-term safety and efficacy of
3 Depo-Provera, particularly in chronic long-term users of Depo-Provera.

4 128. Defendants failed to disclose a known defect and, instead, affirmatively
5 misrepresented that Depo-Provera was safe for its intended use. Defendants disseminated labeling,
6 marketing, promotion and/or sales information to Plaintiff, her healthcare providers, and the general
7 public regarding the safety of Depo-Provera knowing such information was false, misleading, and/or
8 inadequate to warn of the safety risks associated with long-term Depo-Provera use. Defendants did
9 so willfully, wantonly, and with the intent to prevent the dissemination of information known to
10 them concerning Depo-Provera's safety.

11 129. Further, Defendants actively concealed the true risks associated with the use of Depo-
12 Provera, particularly as they relate to the risk of serious intracranial meningioma, by affirmatively
13 representing in numerous communications, which were disseminated to Plaintiff, her healthcare
14 providers, and which included, without limitation, the Package Insert and the Medication Guide,
15 that there were no warnings required to safely prescribe and take Depo-Provera and no intracranial
16 meningioma-related adverse side effects associated with use of Depo-Provera.

17 130. Due to the absence of any warning by the Defendants as to the significant health and
18 safety risks posed by Depo-Provera, Plaintiff was unaware that Depo-Provera could cause the
19 development of a serious and debilitating intracranial meningioma, as this danger was not known to
20 Plaintiff, Plaintiff's healthcare providers, or the general public.

21 131. Due to the absence of any instructions for how to identify and/or monitor Depo-
22 Provera patients for potential intracranial meningioma-related complications, Plaintiff was unaware
23 that Depo-Provera could cause serious, intracranial meningioma-related injuries, as this danger was
24 not known to Plaintiff, Plaintiff's healthcare providers, or the general public.

25 132. Given Defendants' conduct and deliberate actions designed to deceive Plaintiff,
26 Plaintiff's healthcare providers, and the general public, with respect to the safety and efficacy of
27 Depo-Provera, Defendants are estopped from relying on any statute of limitations defenses.
28

CONDUCT WARRANTING PUNITIVE DAMAGES

133. For the reasons set forth above and addressed below, Defendant Pfizer acted with a conscious disregard of the safety of Plaintiff and all the other women, many who were young and of lower socioeconomic status, who were subjected to high dose injections of 150 mg Depo-Provera with the known and/or knowable risk of meningioma brain tumors which was generally accepted in the scientific community, while Defendant Pfizer had available its very own safer alternative medication, Depo Sub-Q Provera 104. Exemplary damages are warranted to punish and deter Defendant Pfizer and others from such conduct in the future.

COUNT I

STRICT LIABILITY – FAILURE TO WARN

134. Plaintiff incorporates by reference each and every preceding paragraph as though fully set forth herein.

135. At all times material herein, Defendants engaged in the business of researching, testing, developing, manufacturing, labeling, marketing, selling, inspecting, handling, storing, distributing, and/or promoting Depo-Provera and placed Depo-Provera into the stream of commerce in a defective and unreasonably dangerous condition. These actions were under the ultimate control and supervision of Defendants.

136. Defendants, as manufacturers, distributors, and marketers of pharmaceutical drugs, are held to the level of knowledge of an expert in the field, and further, Defendants knew or should have known based on information that was available and generally accepted in the scientific community that warnings and other clinically relevant information and data which they distributed regarding the risks associated with the use of Depo-Provera were inadequate.

137. Plaintiff and Plaintiff's treating physicians did not have the same knowledge as Defendants and no adequate warning or other clinically relevant information or data was communicated to Plaintiff or to Plaintiff's treating physicians.

1 138. Defendants had and continue to have a duty to provide adequate warnings and
2 instructions for Depo-Provera, to use reasonable care to design a product that is not unreasonably
3 dangerous to users, and to adequately understand, test, and monitor their product.

4 139. Defendants had and continue to have a duty to provide consumers, including Plaintiff
5 and Plaintiff's physicians, with warnings and other clinically relevant information and data generally
6 accepted within the scientific community regarding the risks and dangers associated with Depo-
7 Provera, as it became or could have become available to Defendants.

8 140. Defendants marketed, promoted, distributed and sold an unreasonably dangerous and
9 defective prescription drug, Depo-Provera, to health care providers empowered to prescribe and
10 dispense Depo-Provera, to consumers, including Plaintiff, without adequate warnings and other
11 clinically relevant information and data regarding the risk of meningioma and the risks of
12 unnecessarily excessive progestin exposure which was available and generally accepted within the
13 scientific community. Through both omission and affirmative misstatements, Defendants misled the
14 medical community about the risk and benefit balance of Depo-Provera, which resulted in injury to
15 Plaintiff.

16 141. Defendants knew or should have known through testing, scientific knowledge,
17 advances in the field, published research in major peer-reviewed journals, or otherwise, that Depo-
18 Provera created a risk of developing serious and debilitating intracranial meningioma. At all relevant
19 times this information was readily available and generally accepted within the scientific community.

20 142. Despite the fact that Defendants knew or should have known based on information
21 generally accepted within the scientific community that Depo-Provera with its higher than needed
22 progestin dosage caused unreasonable and dangerous side effects, they continue to promote and
23 market Depo-Provera without providing adequate clinically relevant information and data or
24 recommending patients be monitored.

25 143. Defendants knew that a safer alternative design and product existed, including its
26 own Depo-SubQ Provera 104 which contained substantially less progestin but was equally effective
27 in preventing pregnancy, but failed to warn the medical community and the patients about the risks
28

1 of the high dose which could be mitigated by using the lower dose formulation, Depo-SubQ Provera
2 104.

3 144. Defendants knew or should have known that consumers, and Plaintiff, specifically,
4 would foreseeably and needlessly suffer injury as a result of Defendants' failures.

5 145. The Depo-Provera supplied to Plaintiff by Defendants was defective, unreasonably
6 dangerous, and had inadequate warnings or instructions at the time it was sold, and Defendants also
7 acquired additional knowledge and information confirming the defective and unreasonably
8 dangerous nature of Depo-Provera. Despite this knowledge and information, Defendants failed and
9 neglected to issue adequate warnings that Depo-Provera causes serious and potentially debilitating
10 intracranial meningioma and/or instructions concerning the need for monitoring and potential
11 discontinuation of use of Depo-Provera.

12 146. Defendants' failure to provide adequate warnings or instructions rendered Depo-
13 Provera unreasonably dangerous in that it failed to perform as safely as an ordinary patient,
14 prescriber, and/or other consumer would expect when used as intended and/or in a manner
15 reasonably foreseeable by the Defendants, and in that the risk of danger outweighs the benefits.

16 147. Defendants failed to provide timely and adequate warnings to physicians,
17 pharmacies, and consumers, including Plaintiff and Plaintiff's intermediary physicians.

18 148. Plaintiff's various prescribing physicians, nurse practitioners, physician assistants,
19 and nurses (hereinafter collectively referred to as "Plaintiff's Prescribing and Administering Health
20 Care Providers") would not have prescribed and administered Depo-Provera to Plaintiff had they
21 been apprised by Defendants of the unreasonably high risk of meningioma associated with usage of
22 Depo-Provera.

23 149. Alternatively, even if Defendants had apprised Plaintiff's Prescribing and
24 Administering Health Care Providers of the unreasonably high risk of meningioma associated with
25 usage of Depo-Provera and these Prescribing and Administering Health Care Providers had still
26 recommended usage of Depo-Provera to Plaintiff, the Prescribing and Administering Health Care
27 Providers would have relayed the information concerning the risk of meningioma to Plaintiff, and
28

1 the alternative treatment of the lower dose subcutaneous Depo-SubQ Provera 104, and Plaintiff as
2 an objectively prudent person would not have chosen to take Depo-Provera, and/or would have
3 opted to take safer and lower dose Depo-SubQ Provera 104, notwithstanding Plaintiff's Prescribing
4 Physician and Administering Health Care Providers' continued recommendation.

5 150. Similarly, if Defendants had warned of the unreasonably high risk of meningioma
6 associated with the usage of Depo-Provera, and the availability of the safer and equally effective
7 lower dose Depo-SubQ Provera 104 in the Patient Information handout, Plaintiff as an objectively
8 prudent person would not have chosen to take Depo-Provera, and/or would have opted to take the
9 safer, lower, and equally effective dose of Depo-SubQ Provera 104, notwithstanding Plaintiff's
10 Prescribing and Administering Health Care Providers' recommendation.

11 151. Defendants failed to include adequate warnings and/or provide adequate clinically
12 relevant information and data that would alert Plaintiff and Plaintiff's Prescribing and Administering
13 Health Care Providers of the dangerous risks of Depo-Provera including, among other things, the
14 development of intracranial meningioma.

15 152. Defendants failed to provide adequate post-marketing warnings and instructions after
16 Defendants knew or should have known of the significant risks of, among other things, intracranial
17 meningioma.

18 153. Defendants continued to aggressively promote and sell Depo-Provera, even after
19 they knew or should have known of the unreasonable risks of intracranial meningioma caused by
20 the drug.

21 154. Defendants had an obligation to provide Plaintiff and Plaintiff's Prescribing and
22 Administering Health Care Providers with adequate clinically relevant information and data and
23 warnings regarding the adverse health risks associated with exposure to Depo-Provera, and/or that
24 there existed safer and more or equally effective alternative drug products.

25 155. By failing to adequately test and research harms associated with Depo-Provera, and
26 by failing to provide appropriate warnings and instructions about Depo-Provera use, patients and
27 the medical community, including prescribing doctors, were inadequately informed about the true
28

1 risk-benefit profile of Depo-Provera and were not sufficiently aware that serious and potentially
2 debilitating intracranial meningioma might be associated with use of Depo-Provera. Nor were the
3 medical community, patients, patients' families, or regulators appropriately informed that serious
4 and potentially debilitating intracranial meningioma might be a side effect of Depo-Provera and
5 should or could be reported as an adverse event.

6 156. The Depo-Provera products designed, researched, manufactured, tested, advertised,
7 promoted, marketed, sold and distributed by Defendants were defective due to inadequate post-
8 marketing surveillance and/or warnings because, even after Defendants knew or should have known
9 of the risks of severe and permanent intracranial meningioma-related injuries from ingesting Depo-
10 Provera, Defendants failed to provide adequate warnings to users or consumers of the products, and
11 continued to improperly advertise, market and/or promote Depo-Provera.

12 157. Depo-Provera is defective and unreasonably dangerous to Plaintiff and other
13 consumers regardless of whether Defendants had exercised all possible care in its preparation and
14 sale.

15 158. The foreseeable risk of serious and potentially debilitating intracranial meningioma
16 caused by Depo-Provera could have been reduced or avoided by Plaintiff, prescribers, and/or other
17 consumers had Defendants provided reasonable instructions or warnings of these foreseeable risks
18 of harm.

19 159. As a direct and proximate result of Defendants' conduct, including the inadequate
20 warnings, dilution or lack of information, lack of adequate testing and research, and the defective
21 and dangerous nature of Depo-Provera, Plaintiff suffered bodily injuries and resulting pain and
22 suffering, disability, mental anguish, loss of capacity for the enjoyment of life, expense of medical
23 and nursing care and treatment, loss of earnings, loss of ability to earn money and other economic
24 losses, and aggravation of previously existing conditions. The losses are either permanent or
25 continuing, and Plaintiff will suffer the losses in the future.

26 ///

27 **COUNT II**

STRICT LIABILITY – DESIGN DEFECT

160. Plaintiff incorporates by reference each and every preceding paragraph as though fully set forth herein.

161. At all times material herein, Defendants engaged in the business of researching, testing, developing, manufacturing, labeling, marketing, selling, inspecting, handling, storing, distributing, and/or promoting Depo-Provera and placed Depo-Provera into the stream of commerce in a defective and unreasonably dangerous condition. These actions were under the ultimate control and supervision of Defendants.

162. Defendants, as manufacturers, designers, distributors, and marketers of pharmaceutical drugs, had a duty to design a product free from a defective condition that was unreasonably dangerous to Plaintiff.

163. Depo-Provera was designed in such a way, using such a high dose of progesterone not necessary for effective contraception, that it posed an unreasonable risk of intracranial meningioma and by placing and keeping Depo-Provera on the market despite Depo-Provera being in a defective condition.

164. Depo-SubQ Provera 104 is a lower dosage version of Depo-Provera that contains 104 mg / 0.65mL and is injected subcutaneously every three (3) months. According to the label, Depo-SubQ Provera 104 can be used for both contraception and treatment of endometriosis.

165. Depo-SubQ Provera 104 never attained meaningful market share, and Defendant failed to promote the product to the medical community as a safer and equally effective method of contraception for women choosing to receive quarterly injections.

166. Defendant failed to promote and encourage conversion of the prescribing gynecological community to Depo-SubQ Provera 104, fearing that doing so could instill a concern of safety as to the risks of its high dose progesterone long standing product, Depo-Provera.

167. It has long been a tenet in the medical and toxicological community that the “dose makes the poison.” Defendants had a viable safer and lower dose alternative in Depo-SubQ Provera

1 104 but failed to warn the medical community prescribing and administering Depo-Provera that
2 Depo-SubQ Provera 104 was a safer alternative.

3 168. Moreover, the 150 mg Depo-Provera itself could have been a viable lower effective
4 dose if it had simply been designed, approved, and sold to be administered subcutaneously, like
5 Depo-SubQ Provera 104 is administered, instead of intramuscularly.

6 169. Injections given intramuscularly are well-known to be absorbed by the body and
7 taken up in the blood serum at much faster rates than injections given subcutaneously because of
8 the much higher vascularization of deep muscle tissue compared to the dermis.

9 170. Studies have shown that 150 mg Depo-Provera administered intramuscularly causes
10 a spike in blood serum levels of DMPA that is more than four (4) times higher than the peak blood
11 serum concentration of DMPA when that same 150 mg Depo-Provera shot is given subcutaneously,
12 and that very high intramuscular peak concentration persists for several days.²⁶ In fact, 150 mg
13 Depo-Provera administered subcutaneously has a remarkably similar pharmacokinetic profile to
14 Depo-SubQ Provera 104.²⁷

15 171. Thus, there are two lower effective doses of Depo-Provera—both Depo-SubQ
16 Provera 104, and the very same 150 mg Depo-Provera simply given subcutaneously instead of
17 intramuscularly.

18 172. Defendants wantonly and willfully failed to apprise the public, including the FDA,
19 the medical community, Plaintiff, Planned Parenthood, and Plaintiff's physicians, of the greatly
20 reduced risk of meningioma when injecting 150 mg Depo-Provera subcutaneously compared to the
21 indicated method of intramuscular injection because Defendants did not want to raise any alarms
22 with respect to the safety profile of Depo-Provera and did not want to lose any of its lucrative market
23 share held in part through its contracts with "authorized generic" partners and subsidiaries.

24 173. Defendants knew or should have known that the Depo-Provera they developed,
25 manufactured, labeled, marketed, sold, and/or promoted was defectively designed in that it posed a
26

27 ²⁶ See Shelton, et al., "Subcutaneous DPMA: a better low dose approach," *Contraception*, Vol. 89,
pp. 341-43 (2014).

28 ²⁷ See *id.* at 342.

1 serious risk of severe and permanent intracranial-meningioma-related injuries when injected
2 intramuscularly.

3 174. Defendants have a continuing duty to design a product that is not unreasonably
4 dangerous to users and to adequately understand, test, and monitor their product.

5 175. Defendants sold, marketed and distributed a product that is unreasonably dangerous
6 for its normal, intended, and foreseeable use.

7 176. Defendants designed, researched, manufactured, tested, advertised, promoted,
8 marketed, sold and distributed Depo-Provera, a defective product which created an unreasonable
9 risk to the health of consumers, and Defendants are therefore strictly liable for the injuries sustained
10 by Plaintiff.

11 177. The Depo-Provera supplied to Plaintiff by Defendants was defective in design or
12 formulation in that, when it left the hands of the manufacturer or supplier, it was in an unreasonably
13 dangerous and a defective condition because it failed to perform as safely as an ordinary consumer
14 would expect when used as intended or in a manner reasonably foreseeable to Defendants, posing a
15 risk of serious and potentially debilitating intracranial meningioma to Plaintiff and other consumers.

16 178. The Depo-Provera ingested by Plaintiff was expected to, and did, reach Plaintiff
17 without substantial change in the condition in which it is sold.

18 179. The Depo-Provera ingested by Plaintiff was in a condition not contemplated by the
19 Plaintiff in that it was unreasonably dangerous, posing a serious risk of permanent vision and retinal
20 injuries.

21 180. Depo-Provera is a medication prescribed for contraception and treatment of
22 endometriosis, among other uses. Depo-Provera in fact causes serious and potentially debilitating
23 intracranial meningioma, a brain tumor that can cause severe damage and require invasive surgical
24 removal, harming Plaintiff and other consumers.

25 181. Plaintiff, ordinary consumers, and prescribers would not expect a contraceptive drug
26 designed, marketed, and labeled for contraception to cause intracranial meningioma.
27
28

1 182. The Depo-Provera supplied to Plaintiff by Defendants was defective in design or
2 formulation in that, when it left the hands of the manufacturer or supplier, it had not been adequately
3 tested, was in an unreasonably dangerous and defective condition, provided an excessive dose of
4 progestin for its purpose and posed a risk of serious and potentially debilitating intracranial
5 meningioma to Plaintiff and other consumers.

6 183. The Depo-Provera supplied to Plaintiff by Defendants was defective in design or
7 formulation in that its effectiveness as a contraceptive did not outweigh the risks of serious and
8 potentially debilitating intracranial meningioma posed by the drug. In light of the utility of the drug
9 and the risk involved in its use, the design of the Depo-Provera drug makes the product unreasonably
10 dangerous.

11 184. Depo-Provera's design is more dangerous than a reasonably prudent consumer would
12 expect when used in its intended or reasonably foreseeable manner. It was more dangerous than
13 Plaintiff expected.

14 185. The intended or actual utility of Depo-Provera is not of such benefits to justify the
15 risk of intracranial meningioma which may cause severe and permanent injuries, thereby rendering
16 the product unreasonably dangerous.

17 186. The design defects render Depo-Provera more dangerous than other drugs and
18 therapies designed for contraception and causes an unreasonable increased risk of injury, including,
19 but not limited, to potentially debilitating intracranial meningioma and sequelae related thereto.

20 187. Defendants knew or should have known through testing, generally accepted
21 scientific knowledge, advances in the field, published research in major peer-reviewed journals, or
22 other means, that Depo-Provera created a risk of serious and potentially debilitating intracranial
23 meningioma and sequelae related thereto.

24 188. Depo-Provera is defective and unreasonably dangerous to Plaintiff and other
25 consumers in that, despite early indications and concerns that Depo-Provera use could result in
26 vision issues, Defendants failed to adequately test or study the drug, including but not limited to:
27 pharmacokinetics and pharmacodynamics of the drug, its effects on the development of brain tumors
28

1 like intracranial meningioma, the potential effects and risks of long-term use, the potential for inter-
2 patient variability, and/or the potential for a safer effective dosing regimen.

3 189. Defendants knew or should have known that consumers, Plaintiff specifically, would
4 foreseeably and needlessly suffer injury as a result of Depo-Provera's defective design.

5 190. Depo-Provera is defective and unreasonably dangerous to Plaintiff and other
6 consumers even if Defendants had exercised all possible care in the preparation and sale of Depo-
7 Provera.

8 191. As a direct and proximate result of Defendants' conduct and defective design,
9 including inadequate testing and research, and the defective and dangerous nature of Depo-Provera,
10 Plaintiff suffered bodily injuries that resulted in pain and suffering, disability, mental anguish, loss
11 of capacity for the enjoyment of life, expense of medical and nursing care and treatment, loss of
12 earnings, loss of ability to earn money, and other economic losses. The losses are either permanent
13 or continuing, and Plaintiff will suffer losses in the future.

14
15 **COUNT III**

16 **NEGLIGENCE**

17 192. Plaintiff incorporates by reference each and every preceding paragraph as though
18 fully set forth herein.

19 193. At all times relevant herein, it was the duty of Defendants to use reasonable care in
20 the design, labeling, manufacturing, testing, marketing, distribution and/or sale of Depo-Provera.

21 194. Defendants failed to exercise ordinary care in the labeling, design, manufacturing,
22 testing, marketing, distribution and/or sale of Depo-Provera in that Defendants knew or should have
23 known that Depo-Provera created a high risk of unreasonable harm to Plaintiff and other users.

24 195. Defendants breached its duty of care to the Plaintiff and her physicians, in the testing,
25 monitoring, and pharmacovigilance of Depo-Provera.

26 196. In disregard of its duty, Defendants committed one or more of the following
27 negligent acts or omissions:
28

1 a. Manufacturing, producing, promoting, formulating, creating, developing,
2 designing, selling, and distributing Depo-Provera without thorough and adequate pre- and post-
3 market testing of the product;

4 b. Manufacturing, producing, promoting, formulating, creating, developing,
5 designing, selling, and distributing Depo-Provera while negligently and intentionally concealing
6 and failing to disclose clinical data which demonstrated the risk of serious harm and associated with
7 Depo-Provera;

8 c. Failing to undertake sufficient studies and conduct necessary tests to
9 determine whether or not Depo-Provera was safe for its intended use;

10 d. Failing to disclose and warn of the product defect to the regulatory agencies,
11 the medical community, and consumers that Defendants knew and had reason to know that Depo-
12 Provera was indeed unreasonably unsafe and unfit for use by reason of the product's defect and risk
13 of harm to its users;

14 e. Failing to warn Plaintiff, the medical and healthcare community, and
15 consumers of the known and knowable product's risk of harm which was unreasonable and that
16 there were safer and effective alternative productions available to Plaintiff and other consumers;

17 f. Failing to provide adequate instructions, guidelines, and safety precautions to
18 those persons to whom it was reasonably foreseeable would use Depo-Provera;

19 g. Advertising, marketing, and recommending the use of Depo-Provera, while
20 concealing and failing to disclose or warn of the dangers known and knowable by Defendants to be
21 connected with, and inherent in, the use of Depo-Provera;

22 h. Representing that Depo-Provera was safe for its intended use when in fact
23 Defendants knew and should have known the product was not safe for its intended purpose;

24 i. Continuing to manufacture and sell Depo-Provera with the knowledge that
25 Depo-Provera was unreasonably unsafe and dangerous;
26
27
28

1 j. Failing to use reasonable and prudent care in the design, research, testing,
2 manufacture, and development of Depo-Provera so as to avoid the risk of serious harm associated
3 with the use of Depo-Provera;

4 k. Failing to design and manufacture Depo-Provera so as to ensure the drug was
5 at least as safe and effective as other similar products;

6 l. Failing to ensure the product was accompanied by proper and accurate
7 warnings about monitoring for potential symptoms related to intracranial meningioma associated
8 with the use of Depo-Provera;

9 m. Failing to ensure the product was accompanied by proper and accurate warnings
10 about monitoring for potential symptoms related to intracranial meningioma associated with the use
11 of Depo-Provera;

12 n. Failing to conduct adequate testing, including pre-clinical and clinical testing,
13 and post-marketing surveillance to determine the safety of Depo-Provera.

14 o. Failing to sell a product with the lowest effective dose knowing that there
15 were safer lower effective dose formulations.

16 197. A reasonable manufacturer, designer, distributor, promoter, or seller under the same
17 or similar circumstances would not have engaged in the aforementioned acts and omissions.

18 198. As a direct and proximate result of the Defendants' negligent testing, monitoring,
19 and pharmacovigilance of Depo-Provera, Defendants introduced a product that they knew or should
20 have known would cause serious and permanent injuries related to the development of intracranial
21 meningioma, and Plaintiff has been injured tragically and sustained severe and permanent pain,
22 suffering, disability, and impairment, loss of enjoyment of life, loss of care, comfort, and economic
23 damages.

24 199. As a direct and proximate result of one or more of the above-stated negligent acts by
25 Defendants, Plaintiff suffered bodily injuries and resulting pain and suffering, disability, mental
26 anguish, loss of capacity for the enjoyment of life, expense of medical and nursing care and
27
28

1 treatment, loss of earnings, loss of consortium, loss of ability to earn money and other economic
2 losses. The losses are either permanent or continuing, and Plaintiff will suffer losses in the future.

3
4 **COUNT IV**

5 **NEGLIGENT FAILURE TO WARN**

6 200. Plaintiff incorporates by reference each and every preceding paragraph as though
7 fully set forth herein.

8 201. At all times material herein, Defendants had a duty to exercise reasonable care and
9 had the duty of an expert in all aspects of the warning and post-sale warning to assure the safety of
10 Depo-Provera when used as intended or in a way that Defendants could reasonably have anticipated,
11 and to assure that the consuming public, including Plaintiff and Plaintiff's physicians, obtained
12 accurate information and adequate instructions for the safe use or non-use of Depo-Provera.

13 202. Defendants' duty of care was that a reasonably careful designer, manufacturer, seller,
14 importer, distributor and/or supplier would use under like circumstances.

15 203. Defendants had a duty to warn Plaintiff, Plaintiff's physicians, and consumers of
16 Depo-Provera's known and knowable dangers and serious side effects, including serious and
17 potentially debilitating intracranial meningioma, as it was reasonably foreseeable to Defendants that
18 Depo-Provera could cause such injuries.

19 204. At all times material herein, Defendants failed to exercise reasonable care and knew,
20 or in the exercise of reasonable care should have known, that Depo-Provera had inadequate
21 instructions and/or warnings.

22 205. Each of the following acts and omissions herein alleged was negligently and
23 carelessly performed by Defendants, resulting in a breach of the duties set forth above. These acts
24 and omissions include, but are not restricted to:

25 a. Failing to accompany their product with proper and adequate warnings,
26 labeling, or instructions concerning the potentially dangerous, defective, unsafe, and deleterious
27
28

propensity of Depo-Provera and of the risks associated with its use, including the severity and potentially irreversible nature of such adverse effects;

b. Disseminating information to Plaintiff and Plaintiff 's physicians that was negligently and materially inaccurate, misleading, false, and unreasonably dangerous to patients such as Plaintiff;

c. Failing to provide warnings or other information that accurately reflected the symptoms, scope, and severity of the side effects and health risks;

d. Failing to adequately test and/or warn about the use of Depo-Provera, including, without limitations, the possible adverse side effects and health risks caused by the use of Depo-Provera;

e. Failure to adequately warn of the risks that Depo-Provera could cause the development of intracranial meningioma and sequelae related thereto;

f. Failure to adequately warn of the risk of serious and potentially irreversible injuries related to the development of intracranial meningioma, a brain tumor;

g. Failure to instruct patients, prescribers, and consumers of the need for al monitoring when taking Depo-Provera for symptoms potentially related to the development of intracranial meningioma;

h. Failure to instruct patients, prescribers, and consumers of the need to discontinue Depo-Provera in the event of symptoms potentially related to the development of intracranial meningioma;

i. Failing to provide instructions on ways to safely use Depo-Provera to avoid injury, if any;

j. Failing to explain mechanism, mode, and types of adverse events associated with Depo-Provera;

k. Failing to provide adequate training or information to medical care providers for appropriate use of Depo-Provera and patients taking Depo-Provera; and

1 l. Representing to physicians, including but not limited to Plaintiff's
2 prescribing physicians, that this drug was safe and effective for use.

3 m. Failing to warn that there is a safer feasible alternative with a lower effective dose of
4 progestin.

5 n. Failing to warn that the 150 mg dosage of progestin injected intramuscularly
6 was an excessive and thus toxic dose capable of causing and or substantially contributing to the
7 development and growth of meningioma tumors.

8 206. Defendants knew or should have known of the risk and danger of serious bodily harm
9 from the use of Depo-Provera but failed to provide an adequate warning to patients and prescribing
10 physicians for the product, including Plaintiff and Plaintiff's prescribing physicians, despite
11 knowing the product could cause serious injury.

12 207. Plaintiff was prescribed and used Depo-Provera for its intended purpose.

13 208. Plaintiff could not have known about the dangers and hazards presented by Depo-
14 Provera.

15 209. The warnings given by Defendants were not accurate, clear, or complete and/or were
16 ambiguous.

17 210. The warnings, or lack thereof, that were given by Defendants failed to properly warn
18 prescribing physicians, including Plaintiff's prescribing physician, of the known and knowable risk
19 of serious and potentially irreversible injuries related to the development of intracranial
20 meningioma, and failed to instruct prescribing physicians to test and monitor for the presence of the
21 injuries and to discontinue use when symptoms of meningioma manifest.

22 211. The warnings that were given by the Defendants failed to properly warn Plaintiff and
23 prescribing physicians of the prevalence of intracranial meningioma and sequelae related thereto.

24 212. Plaintiff and Plaintiff's prescribing physicians reasonably relied upon the skill,
25 superior knowledge, and judgment of Defendants. Defendants had a continuing duty to warn
26 Plaintiff and prescribing physicians of the dangers associated with Depo-Provera. Had Plaintiff
27
28

1 received adequate warnings regarding the risks of Depo-Provera, Plaintiff would not have used the
2 product.

3 213. Defendants' failure to exercise reasonable care in the dosing information, marketing,
4 testing, and warnings of Depo-Provera was a proximate cause of Plaintiff's injuries and damages.

5 214. As a direct and proximate result of Defendants' negligent failure to warn, Plaintiff
6 suffered bodily injuries and resulting pain and suffering, disability, mental anguish, loss of capacity
7 for the enjoyment of life, expense of medical and nursing care and treatment, loss of earnings, loss
8 of consortium, loss of ability to earn money and other economic losses. The losses are either
9 permanent or continuing, and Plaintiff will suffer the losses in the future.

10 11 **COUNT V**

12 **NEGLIGENT DESIGN DEFECT**

13 215. Plaintiff incorporates by reference each and every preceding paragraph as though
14 fully set forth herein.

15 216. At all times material herein, Defendants had a duty to exercise reasonable care and
16 had the duty of an expert in all aspects of the design, formulation, manufacture, compounding,
17 testing, inspection, packaging, labeling, distribution, marketing, promotion, advertising, sale,
18 testing, and research to assure the safety of Depo-Provera when used as intended or in a way that
19 Defendants could reasonably have anticipated, and to assure that the consuming public, including
20 Plaintiff and Plaintiff's physicians, obtained accurate information and adequate instructions for the
21 safe use or non-use of Depo-Provera.

22 217. At all times material herein, Defendants failed to exercise reasonable care and the
23 duty of an expert and knew, or in the exercise of reasonable care should have known, that Depo-
24 Provera was not properly manufactured, designed, compounded, tested, inspected, packaged,
25 distributed, marketed, advertised, formulated, promoted, examined, maintained, sold, prepared, or
26 a combination of these acts.

1 218. Each of the following acts and omissions herein alleged was negligently and
2 carelessly performed by Defendants, resulting in a breach of the duties set forth above. These acts
3 and omissions include, but are not restricted to negligently and carelessly:

4 a. Failing to use due care in developing, testing, designing, and manufacturing
5 Depo-Provera so as to avoid the aforementioned risks to individuals when Depo-Provera was being
6 used for contraception and other indications;

7 b. Failing to conduct adequate pre-clinical and clinical testing and post-
8 marketing surveillance to determine the safety of Depo-Provera; and

9 c. Designing, manufacturing, and placing into the stream of commerce a
10 product which was unreasonably dangerous for its reasonably foreseeable use, which Defendants
11 knew or should have known could cause injury to Plaintiff.

12 d. Failing to use due care in developing, testing, designing, and manufacturing
13 Depo-Provera with the lowest effective dose as a safer alternative which clearly existed at all
14 relevant times so as to avoid the aforementioned risks to individuals when high dose progestin Depo-
15 Provera was being used for contraception.

16 219. Defendants' negligence and Depo-Provera's failures arise under circumstances
17 precluding any other reasonable inference other than a defect in Depo-Provera.

18 220. Defendants' failure to exercise reasonable care in the design, dosing information,
19 marketing, warnings, and/or manufacturing of Depo-Provera was a proximate cause of Plaintiff's
20 injuries and damages.

21 221. As a direct and proximate result of Defendants' negligence, Plaintiff suffered bodily
22 injuries and resulting pain and suffering, disability, mental anguish, loss of capacity for the
23 enjoyment of life, expense of medical and nursing care and treatment, loss of earnings, loss of
24 consortium, loss of ability to earn money and other economic losses. The losses are either permanent
25 or continuing, and Plaintiff will suffer the losses in the future.

26 ///

27 ///

COUNT VI

NEGLIGENT MISREPRESENTATION

222. Plaintiff incorporates by reference each and every preceding paragraph as though fully set forth herein.

223. At all relevant times, Defendants negligently provided Plaintiff, her healthcare providers, and the general medical community with false or incorrect information or omitted or failed to disclose material information concerning Depo-Provera, including, but not limited to, misrepresentations regarding the safety and known risks of Depo-Provera.

224. The information distributed by the Defendants to the public, the medical community, Plaintiff, and her Prescribing and Administering Health Care Providers, including advertising campaigns, labeling materials, print advertisements, commercial media, was false and misleading and contained omissions and concealment of truth about the dangers of Depo-Provera.

225. Defendants' intent and purpose in making these misrepresentations was to deceive and defraud the public and the medical community, including Plaintiff and Plaintiff's Prescribing and Administering Health Care Providers; to falsely assure them of the quality of Depo-Provera and induce the public and medical community, including Plaintiff and her Prescribing and Administering Health Care Providers to request, recommend, purchase, and prescribe Depo-Provera.

226. The Defendants had a duty to accurately and truthfully represent to the medical and healthcare community, medical device manufacturers, Plaintiff, her Prescribing and Administering Health Care Providers and the public, the known risks of Depo-Provera, including its propensity to cause intracranial meningioma and sequelae related thereto.

227. Defendants made continued omissions in the Depo-Provera labeling, including promoting it as safe and effective while failing to warn of its propensity to cause intracranial meningioma and sequelae related thereto.

1 228. Defendants made additional misrepresentations beyond the product labeling by
2 representing Depo-Provera as safe and effective for contraception and other indications with only
3 minimal risks.

4 229. Defendants misrepresented and overstated the benefits of Depo-Provera to Plaintiff,
5 Plaintiff's Prescribing and Administering Health Care Providers, and the medical community
6 without properly advising of the known risks associated with intracranial meningioma and sequelae
7 related thereto.

8 230. Defendants misrepresented and overstated that the Depo-Provera dosage was needed
9 to protect against pregnancy when Defendants knew that a safer alternative existed with forty-six
10 (46) fewer mg per dose of the powerful progestin being ingested quarterly in women, and when
11 Defendants could have warned and recommended usage of Depo-SubQ Provera 104 instead.

12 231. In reliance upon the false and negligent misrepresentations and omissions made by
13 the Defendants, Plaintiff and Plaintiff's Prescribing and Administering Health Care Providers were
14 induced to, and did use Depo-Provera, thereby causing Plaintiff to endure severe and permanent
15 injuries.

16 232. In reliance upon the false and negligent misrepresentations and omissions made by
17 the Defendants, Plaintiff and Plaintiff's Prescribing and Administering Health Care Providers were
18 unable to associate the injuries sustained by Plaintiff with her Depo-Provera use, and therefore
19 unable to provide adequate treatment. Defendants knew or should have known that the Plaintiff,
20 Plaintiff's Prescribing and Administering Health Care Providers, and the general medical
21 community did not have the ability to determine the true facts which were intentionally and/or
22 negligently concealed and misrepresented by the Defendants.

23 233. Plaintiff and her Prescribing and Administering Health Care Providers would not
24 have used or prescribed Depo-Provera had the true facts not been concealed by the Defendants.

25 234. Defendants had sole access to many of the material facts concerning the defective
26 nature of Depo-Provera and its propensity to cause serious and dangerous side effects.
27
28

1 235. At the time Plaintiff was prescribed and administered Depo-Provera, Plaintiff and
2 her Prescribing and Administering Health Care Providers were unaware of Defendants' negligent
3 misrepresentations and omissions.

4 236. The Defendants failed to exercise ordinary care in making representations
5 concerning Depo-Provera while they were involved in their manufacture, design, sale, testing,
6 quality assurance, quality control, promotion, marketing, labeling, and distribution in interstate
7 commerce, because the Defendants negligently misrepresented Depo-Provera's significant risk of
8 unreasonable and dangerous adverse side effects.

9 237. Plaintiff and Plaintiff's Prescribing and Administering Health Care Providers
10 reasonably relied upon the misrepresentations and omissions made by the Defendants, where the
11 concealed and misrepresented facts were critical to understanding the true dangers inherent in the
12 use of Depo-Provera.

13 238. Plaintiff and Plaintiff's Prescribing and Administering Health Care Providers'
14 reliance on the foregoing misrepresentations and omissions was the direct and proximate cause of
15 Plaintiff's injuries.

16 239. As a direct and proximate result of reliance upon Defendants' negligent
17 misrepresentations, Plaintiff suffered bodily injuries and resulting pain and suffering, disability,
18 mental anguish, loss of capacity for the enjoyment of life, expense of medical and nursing care and
19 treatment, loss of earnings, loss of consortium, loss of ability to earn money and other economic
20 losses. The losses are either permanent or continuing, and Plaintiff will suffer the losses in the future.

21 240. Plaintiff incorporates by reference each and every preceding paragraph as though
22 fully set forth herein.

23 241. The Defendants falsely and fraudulently have represented and continue to represent
24 to the medical and healthcare community, Plaintiff and her Prescribing and Administering Health
25 Care Providers, and the public in general that Depo-Provera has been appropriately tested and was
26 found to be safe and effective.

1 242. At all times material herein, Defendants misrepresented to consumers and
2 physicians, including Plaintiff and Plaintiff's physicians and the public in general, that Depo-Provera
3 is safe for use as a contraceptive and for other indications.

4 243. Defendants knew or should have known of the falsity of such a representation to
5 consumers, physicians, and the public in general since Depo-Provera is far from the only
6 contraceptive approved by the FDA, and it is not the only contraception option. Nevertheless,
7 Defendants' marketing of Depo-Provera falsely represented Depo-Provera to be a safe and effective
8 contraceptive option with no increased risk of intracranial meningioma and sequelae related thereto.

9 244. The representations were, in fact, false. When the Defendants made these
10 representations, it knew and/or had reason to know that those representations were false, and
11 Defendants willfully, wantonly, and recklessly disregarded the inaccuracies in their representations
12 and the dangers and health risks to users of Depo-Provera.

13 245. Prior to Plaintiff's use of Depo-Provera, Defendants knew or should have known of
14 adverse event reports indicating the development of intracranial meningioma in individuals who had
15 taken Depo-Provera.

16 246. These representations were made by the Defendants with the intent of defrauding
17 and deceiving the medical community, Plaintiff, and the public, and also inducing the medical
18 community, Plaintiff, Plaintiff's Prescribing and Administering Health Care Providers, and/or the
19 public, to recommend, prescribe, dispense, and purchase Depo-Provera for use as a contraceptive
20 and other treatment indications while concealing the drug's known propensity to cause serious and
21 debilitating intracranial meningioma and sequelae related thereto.

22 247. Despite the fact that the Defendants knew or should have known of Depo-Provera's
23 propensity to cause serious and potentially debilitating injuries due to the development of
24 intracranial meningioma and sequelae related thereto, the label did not contain any of this
25 information in the "Warnings" section. In fact, the label for Depo-Provera has been updated at least
26 a dozen times over the past 20 years, yet at no point did Defendants provide any of the foregoing
27 information in the "Warnings" section. To date, the Depo-Provera label still does not include any
28

1 warnings whatsoever that indicate the dangers of intracranial meningioma and sequela related
2 thereto after using Depo-Provera.

3 248. In representations to Plaintiff and/or to her healthcare providers, including Plaintiff's
4 prescribing physician, the Defendants fraudulently stated that Depo-Provera was safe and omitted
5 warnings related to intracranial meningioma.

6 249. In representations to Plaintiff and/or to her Prescribing and Administering Health
7 Care Providers, Defendants fraudulently stated that Depo-Provera was safe and concealed and
8 intentionally omitted material information from the Depo-Provera product labeling in existence at
9 the time Plaintiff was prescribed Depo-Provera in 2005.

10 250. Defendants were under a duty to disclose to Plaintiff and her physicians the defective
11 nature of Depo-Provera, including but not limited to, the propensity to cause the development of
12 intracranial meningioma, and consequently, its ability to cause debilitating and permanent injuries.

13 251. The Defendants had a duty when disseminating information to the public to
14 disseminate truthful information; and a parallel duty not to deceive the public, Plaintiff, and/or her
15 physicians.

16 252. The Defendants knew or had reason to know of the dangerous side effects of Depo-
17 Provera as a result of information from case studies, clinical trials, literature, and adverse event
18 reports available to the Defendants at the time of the development and sale of Depo-Provera, as well
19 as at the time of Plaintiff's prescription.

20 253. Defendants' concealment and omissions of material facts concerning the safety of
21 the Depo-Provera were made purposefully, willfully, wantonly, and/or recklessly to mislead
22 Plaintiff, Plaintiff's physicians, surgeons and healthcare providers and to induce them to purchase,
23 prescribe, and/or use the drug.

24 254. At the time these representations were made by Defendants, and at the time Plaintiff
25 and/or her Prescribing and Administering Health Care Providers used Depo-Provera, Plaintiff and/or
26 her Prescribing and Administering Health Care Providers were unaware of the falsehood of these
27 representations.

257. These representations made by Defendants were false when made and/or were made with the pretense of actual knowledge when such knowledge did not actually exist, and were made recklessly and without regard to the true facts.

259. As a direct and proximate result of reliance upon Defendants' fraudulent misrepresentations, Plaintiff suffered bodily injuries and resulting pain and suffering, disability, mental anguish, loss of capacity for the enjoyment of life, expense of medical and nursing care and treatment, loss of earnings, loss of consortium, loss of ability to earn money and other economic losses. The losses are either permanent or continuing, and Plaintiff will suffer the losses in the future.

BREACH OF EXPRESS WARRANTY

COMPLAINT AND DEMAND FOR JURY TRIAL

1 262. At all relevant times herein, Defendants engaged in the business of researching,
2 testing, developing, manufacturing, labeling, marketing, selling, inspecting, handling, storing,
3 distributing, and/or promoting Depo-Provera, and placed it into the stream of commerce in a
4 defective and unreasonably dangerous condition. These actions were under the ultimate control and
5 supervision of Defendants.

6 263. Defendants expressly warranted to Plaintiff, Plaintiff's Prescribing and
7 Administering Health Care Providers, and the general public, by and through Defendants and/or
8 their authorized agents or sales representatives, in publications, labeling, the internet, and other
9 communications intended for physicians, patients, Plaintiff, and the general public, that Depo-
10 Provera was safe, effective, fit and proper for its intended use.

11 264. Depo-Provera materially failed to conform to those representations made by
12 Defendants, in package inserts and otherwise, concerning the properties and effects of Depo-
13 Provera, which Plaintiff purchased and consumed via intramuscular injection in direct or indirect
14 reliance upon these express representations. Such failures by Defendants constituted a material
15 breach of express warranties made, directly or indirectly, to Plaintiff concerning Depo-Provera as
16 sold to Plaintiff.

17 265. Defendants expressly warranted that Depo-Provera was safe and well-tolerated.
18 However, Defendants did not have adequate proof upon which to base such representations, and, in
19 fact, knew or should have known that Depo-Provera was dangerous to the well-being of Plaintiff
20 and others.

21 266. Depo-Provera does not conform to those express representations because it is
22 defective, is not safe, and has serious adverse side effects.

23 267. Plaintiff and Plaintiff's physicians justifiably relied on Defendants' representations
24 regarding the safety of Depo-Provera, and Defendants' representations became part of the basis of
25 the bargain.
26
27
28

1 274. Defendants were the sellers of the Depo-Provera and sold Depo-Provera to be taken
2 for contraception or to treat endometriosis, among other indications. Plaintiff was prescribed and
3 purchased Depo-Provera for these intended purposes.

4 275. When the Depo-Provera was prescribed by Plaintiff's physicians and taken by
5 Plaintiff, the product was being prescribed and used for the ordinary purpose for which it was
6 intended.

7 276. Defendants impliedly warranted their Depo-Provera product, which they
8 manufactured and/or distributed and sold, and which Plaintiff purchased and ingested, to be of
9 merchantable quality and fit for the common, ordinary, and intended uses for which the product was
10 sold.

11 277. Defendants breached their implied warranties of the Depo-Provera product because
12 the Depo-Provera sold to Plaintiff was not fit for its ordinary purpose as a contraceptive or to treat
13 endometriosis safely and effectively, among other uses.

14 278. The Depo-Provera would not pass without objection in the trade; is not of fair
15 average quality; is not fit for its ordinary purposes for which the product is used; was not adequately
16 contained, packaged and labeled; and fails to conform to the promises or affirmations of fact made
17 on the container or label.

18 279. Defendants' breach of their implied warranties resulted in the intramuscular
19 administration of the unreasonably dangerous and defective product into Plaintiff, which placed
20 Plaintiff's health and safety at risk and resulted in the damages alleged herein.

21 280. As a direct and proximate result of reliance upon Defendants' breaches of warranty,
22 Plaintiff suffered bodily injuries and resulting pain and suffering, disability, mental anguish, loss of
23 capacity for the enjoyment of life, past and future medical care and treatment, loss of earnings, loss
24 of consortium, loss of ability to earn money and other economic losses, and other damages. The
25 losses are either permanent or continuing, and Plaintiff will suffer the losses in the future.

27 ///

PRAYER FOR RELIEF

WHEREFORE, Plaintiff respectfully requests that the Court:

1. Award Plaintiff compensatory and punitive exemplary damages in an amount to be determined at trial, and also including, but not limited to:
 - a. General Damages for severe physical pain, mental suffering, inconvenience, and loss of the enjoyment of life;
 - b. Special Damages, including all expenses, incidental past and future expenses, medical expenses, and loss of earnings and earning capacity;
2. Award interest as permitted by law;
3. Award reasonable attorneys' fees and costs, as provided for by law; and
4. Grant such other and further relief as the Court deems just and proper.

DEMAND FOR JURY TRIAL

Plaintiff demands a trial by jury on all Counts and as to all issues.

Dated: December 4, 2024

Respectfully Submitted,

By: /s/ Cynthia L. Garber
